### DETAILED ACTION

1) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2) Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Wulff et al (5632361).

Wulff et al provides a magnetorheological damper comprising: an inner tube (202) with a first end and a second end; a magnetorheological piston (203) disposed within and slidably engaging the inner tube; an outer tube (216) surrounding the inner tube, wherein the outer tube is in fluid communication with the inner tube; a valve (207) disposed proximate the first end of the inner tube and providing fluid communication between the tubes; magnetically energizable passages (fig 5a); a rod (204) having a first end attached to the piston and having a second end extending outside the inner and outer tubes; inherently an electrode is disposed in the rod operatively connected to the piston to supply power to the coil. Please note that the electrode running to the coil has to run through the rod in order to maintain the operation of the damper. Clearly the upper portion of the outer tube of Wulff contains a gas.

### ***Claim Rejections - 35 USC § 103***

3) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3683

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4) Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wulff et al in view of Jensen et al.

Wulff et al lacks the specific valve claimed.

Jensen et al provides a valve including first and second discs (82, 54); a valve body (58) having at least one orifice and a spring (74, 90).

It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided the valve of Wulff et al with the valve as taught by Jensen et al in order to further regulate the fluid flow through the passageways.

#### ***Response to Arguments***

5) Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection. Please note that this action is not final.
